"Elongated Styloid Process and Glossopharyngeal Neuralgia."

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 90, No 11, Nov 62; pp 1109-1113.

Abstract [German summary modified]: Report on 4 cases of glossopharyngeal neuralgia due to anomalously long styloid process (as found in 4% of autopsies but thought to remain asymptomatic in most of cases) impinging on nerve; author feels that many refractory cases of painful "otitis" would be cured by excision of process or section of nerve. In the 4 cases, all symptoms were alleviated by surgery. Rentgenogram, 2 Yugoslav and 1 Western references.

"Foreign Bodies in the Bronchus"

Belgrade, Srpski arhiv za celokupno lekarstvo, Vol 93, No 10, Oct 1965, pp 951-955

Abstract: Bronchoscopy is the most reliable method for confirming the presence of foreign bodies in the respiratory organs. Anamnesic data are very important for the diagnosis, but it was found in many cases that the patients, or persons accompanying them, are reluctant to give the required information. Symptomatology of foreign bodies should be especially familiar to general practitioners and pediatricians as they are usually the first to encounter such patients. 2 Western, 13 Yugoslav references. German summary. Manuscript received 11 Jan 1965.

"Changes in the Blood of Lambs Naturally Infected by Trichostrongylides During the Pasture Season"

Belgrade, Acta Veterinaria, Vol 16, No. 3, 1966; pp 217-228

Abstract [English summary modified]: Hemograms, fecal studies and serum protein analysis in lambs in the field in 1963 and 1964. Trichostrongyloidosis was much more prevalent in 1963 due to the dry season and relative scarcity of food; eosinophilia paralleled increase in gammaglobulins and both occurred simultaneously with the decrease in intensity of parasitization. "The Use of the Mintic Preparation for Poultry Nematode Control"

Belgrade, Veterinarski Glasnik, Vol 20, No 9, 1966, pp 689-691

Abstract: The effectiveness of the Mintic preparation (product of ICI Company, England) in controlling nematodes in poultry has been investigated. Young hens used during the tests were subjected to Ascaridia and Heterakis nematodes. Tests showed that orally administered Mintic preparation was exceedingly effective against young and adult Ascaridia nematodes (96.6%). In the case of Heterakis the results were, however, very poor (28.1%). There are 6 Western references. (Manuscript received, 20 Aug 66.)

"Accidents in Tracheotomy."

Belgrade, Broski Arhiv za Celokupno Lekarstvo, Vol 90, No 12, December 1962, pp 1185-1190.

Abstract: [Authors' English summary modified] Such accidents are not accidents in the medical-legal sense or professional mistakes (being often inevitable) and should perhaps be called accidental complications, e.g., bleeding ending in death; pneumothorax; creation of tracheo-oesophageal fistulae after the posterior wall of the trachea has been cut through; asphyxia due to excessive retroflexion of the head during tracheotomy in patients with large endolaryngeal tumors or goiter blocking the trachea or due to occlusion of the cannula.

Title : Abundance of Bacteria in the Central Region of the Adriatic Sea

Orig Pub : Glasnik biol. sek. Hrvatsko prirodosl. drustvo, 1953 (1955), Ser. 2B, 7, 119-121

Abstract : The bacteria content in the Adriatic Sea fluctuated from 20 to 4200 in 1 ml of water, and the highest number was found at a depth of 30-40 m. Amid the bacterial flora, upwards of 70% consists of gram-negative bacilli and 14% of cocci. The majority of isolated bacteria are chromogenic and 53.3% form a yellow pigment. The

"The Problem of Surgical Treatment of Papillary Carcinoma of the Thyroid"

Zagreb, Lijecknicki Vjesnik, Vol 88, No 3, 1966, pp 241-247

Abstract: The authors discuss the latest methods of surgical treatment of papillary cancer of the thyroid gland, comparing the theoretical and practical results of modern medicine with their own practice and experience. Radical extirpation of the thyroid gland and all swollen lymph nodes is undoubtedly considered to be the most effective method of this cancer treatment. When it is a case of primary cancer in only one lobe in patients under forty, lobectomy with evacuation of the swollen lymph nodes gives satisfactory results. None of the operated patients showed signs of a recurrence over a period of 2, 5, and 7 years following intervention. Pictures. 23 western references. Manuscript received 14 Dec 65.

GVJETANOVIC, B. "The Etiology of 'Zajuzivanje' (Southern Wind Disease) in Sheep."

Belgrade, Veterinarski Glasnik, Vol 17, No 7, 1963, pp 605-612.

Abstract: [Author's English summary modified] The term "zajuzivanje" is applied by Yugoslav shepherds to illnesses occurring in windy, rainy autumn weather among highland sheep and sheep from other areas when driven to wintering areas in the lower, more southerly, and warmer areas of Herzegovina, Montenegro, and Dalmatia. The author concludes on the basis of extensive epizootiological inquiry, field experiments, and laboratory examinations over a period of 10 years that "zajuzivanje" has been used to describe a variety of diseases such as tick-paralysis, tick-borne fever, Mediterranean sheep rickettsiosis, babesiosis, and piroplasmosis. Tick-borne fever and tick-paralysis occur in autumn through infestation by the tick *Ixodes ricinus*, which is active only when the air is humid and when the temperature is under 20 degrees centigrade. Mediterranean rickettsiosis, babesiosis, and piroplasmosis are caused in spring by the tick *Rhipicephalus bursa*. Two illustrations, 20 references (mainly Western, a few Yugoslav).
